Colorectal Eporediensis Centre provides clinical, educational and research services in a manner to promote the diffusion of medical informations and news concerning coloproctology. At present the Colorectal Eporediensis Centre represents one of the Italian reference centres for colorectal diseases.

It organises in Ivrea a weekly refresher course in Coloproctology in which, until now, more than 600 surgeons have attended.

The Colorectal Eporediensis Centre every two years invites the most representative colorectal surgeons from all over the world to get together for an International Meeting of Coloproctology in which a very high level scientific program and some social and convivial events try to satisfy the expectations of all the participants. The scientific program of the Meeting will provide surgeons with in-depth and up-to-date knowledge relative to surgery of the colon and rectum, with special emphasis on patient care, teaching and research. Presentation formats include conferences, lectures, formal papers, panel discussions, question periods, poster sessions and audio-visual sessions. A live demonstration will be included in the program. The purpose of all sessions is to enhance individual knowledge in order to improve the quality of care of patients with diseases of the colon and rectum.

Target audience: The program is intended for education of colon and rectal surgeons, general surgeons and others involved in the treatment of diseases affecting the colon and rectum.
